

Security modules

Extend your protection
where your business
needs it most

for Kaspersky Next Optimum

Kaspersky Next Optimum is tailored security for small and mid-sized businesses. Built on a strong foundation of endpoint protection enhanced by endpoint detection and response features, it also enables a smooth upgrade to essential XDR or MXDR for advanced cybersecurity.

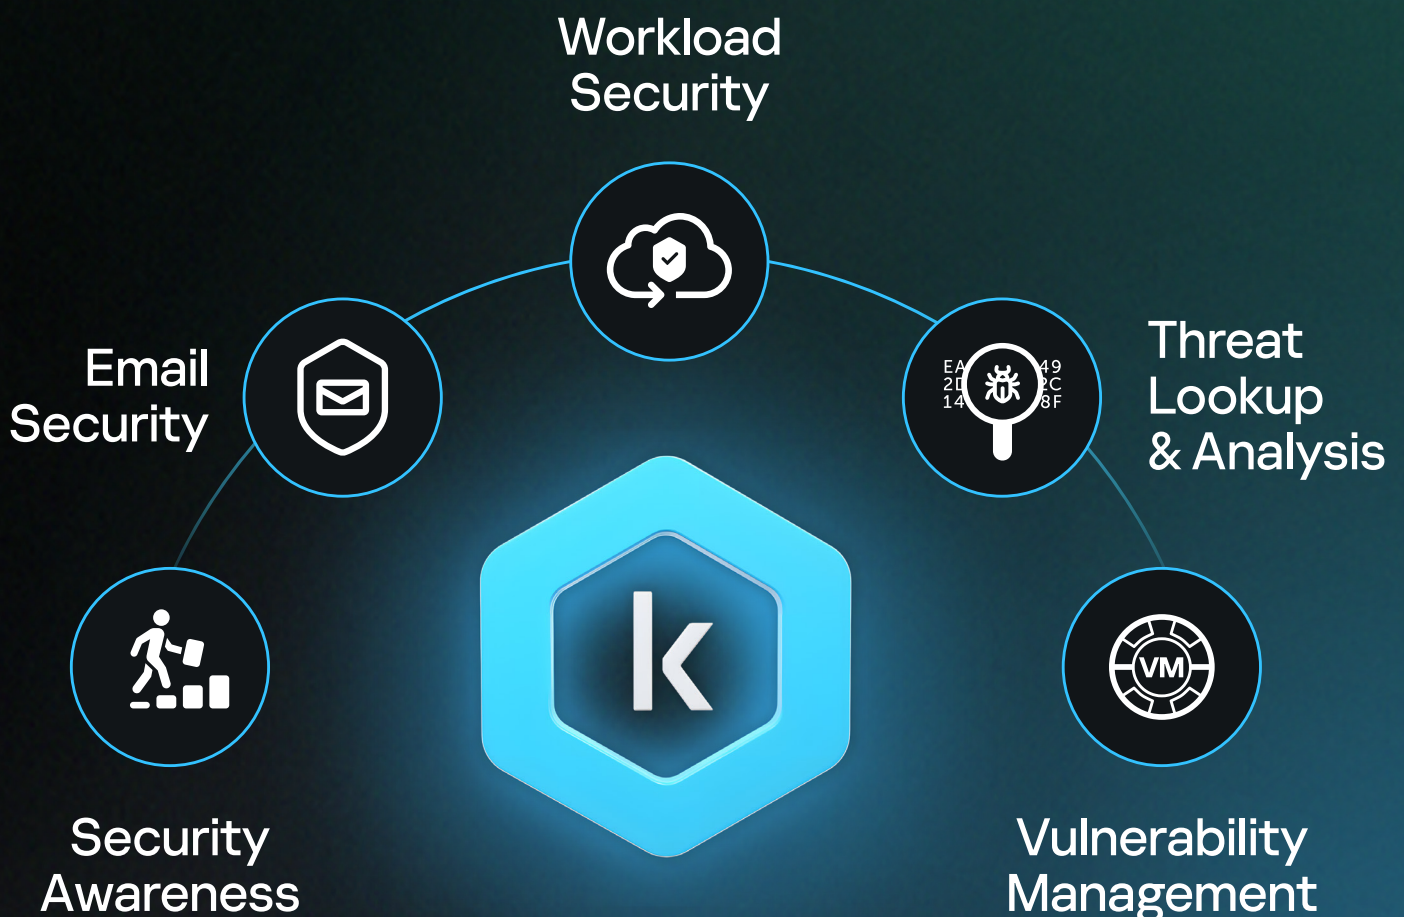

Strengthen specific areas of your protection with security modules

As your business grows, your attack surface grows with it. New employees, tools, environments, email flows, domains and digital services can all create new opportunities for attackers.

Security modules let you add specific security capabilities to Kaspersky Next Optimum when you need them, without replacing your existing setup or adding unnecessary complexity.

As your business evolves, so do your security needs

Each module can be added gradually based on existing internal expertise, business priorities and required level of protection.

Add protection where it matters most

Security Awareness

Turn employees into an extra layer of defense

- Security awareness and phishing simulation
- Role-based cybersecurity training

Email Security

Stop email threats before they reach users
