

# Kaspersky Ask the Analyst

## Continuous threat research

enables Kaspersky to discover, infiltrate and monitor closed communities and dark forums worldwide frequented by adversaries and cybercriminals. Our analysts leverage this access to proactively detect and investigate the most damaging and notorious threats, as well as threats tailored to target specific organizations

## Ask the Analyst Deliverables

(Unified request-based subscription)

# Kaspersky Ask the Analyst

Cybercriminals are constantly developing sophisticated ways of attacking businesses. Today's volatile and fast-growing threat landscape features increasingly agile cybercrime techniques. Organizations face complex incidents caused by non-malware attacks, fileless attacks, living-off-the-land attacks, zero-day exploits — and combinations of all of these built into complex threats, APT-like and targeted attacks.

> In an age of business-crippling cyberattacks, cybersecurity professionals are more important than ever, but finding and retaining them isn't easy. And even if you have a well-established cybersecurity team, your experts can't always be expected to fight the war against sophisticated threats alone — **they need to be able to call on expert third-party assistance**. External expertise can shed light on the likely paths of complex attacks and APTs, and deliver actionable advice on the most decisive way to eliminate them.

The **Kaspersky Ask the Analyst** service extends our Threat Intelligence portfolio, enabling you to request guidance and insights into specific threats you're facing or interested in. The service tailors Kaspersky's powerful threat intelligence and research capabilities to your specific needs, enabling you to build resilient defenses against threats targeting your organization.

### **APT and Crimeware**

Additional information on published reports and ongoing research (on top of APT or Crimeware Intelligence Reporting service)<sup>1</sup>

# Descriptions of threats, vulnerabilities and related IoCs

- General description of a specific malware family
- Additional context for threats (related hashes, URLs, CnCs, etc.)
- Information on a specific vulnerability (how critical it is, and the corresponding protection mechanisms in Kaspersky products)

<sup>1</sup> Available to customers with active APT and/or Crimeware Intelligence Reporting only

<sup>2</sup> Already included in the Kaspersky Digital Footprint Intelligence subscription

#### Malware Analysis

- Malware sample analysis
  - Recommendations on further remediation actions

### Dark Web Intelligence<sup>2</sup>

- Dark Web research on particular artefacts, IP addresses, domain names, file names, e-mails, links or images
- Information search and analysis

## ICS Related Requests

- Additional information on published reports
- ICS Vulnerability information
- ICS threat statistics and trends for region / industry
- ICS Malware Analysis Information on regulations or standards

## Service benefits

#### Augment your expertise

Get on-demand access to industry experts without having to search for and invest in hiring hard to find full-time specialists

#### Accelerate investigations

Effectively scope and prioritize incidents based on tailored and detailed contextual information

#### Respond fast

Respond to threats and vulnerabilities fast using our guidance to block attacks via known vectors

# How it works

Kaspersky Ask the Analyst can be purchased separately or on top of any of our threat intelligence services.

You can submit your requests via Kaspersky Company Account, our corporate customer support portal. We will respond by email, but if necessary and agreed on by you, we can organize a conference call and/or screen sharing session. Once your request has been accepted, you'll be informed of the estimated timeframe for processing it.
