## Statement of Compatibility between Valmet DNA and Kaspersky KICS

Valmet has tested in cooperation with Kaspersky their KICS product with Valmet DNA automation system. Test were made using Valmet DNA system version C2018 and KICS for Nodes version 2.5 in Windows Server 2016 and Windows 10 environment.

Considered their individual technical requirements in the testing environment, it was proven that both products can coexist in the same environment. Intensive testing did not reveal any compatibility issues between Valmet DNA C2018 and Kaspersky KICS v2.5. However, current installations in the customer system are not identical with the above testing arrangements and thus every installation needs to be assessed beforehand from technical point of view before actual installations. Also, technical support practicalities need to be agreed between Customer, Valmet and Kaspersky.

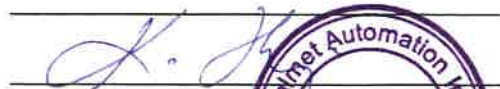

It is also possible to install KICS for Networks to Valmet DNA environment in a passive mode.

Currently Valmet cooperates closely with Kaspersky to maintain the compatibility between Valmet DNA and KICS in the future versions as well. Valmet customers who are interested in using Kaspersky products in their Valmet DNA systems are advised to contact nearest Valmet customer service office for support how Kaspersky products are best installed and supported in the customer's existing Valmet DNA environment. For smooth cooperation it is recommended that customer has a valid service agreement with Valmet.

For further information, please contact your nearest Valmet customer service office.
