

Essential Installation Service

For Kaspersky SIEM

Essential Installation Service ensures fast, reliable deployment of Kaspersky SIEM, enabling your security team to collect, analyze, and act on security events in real time.

Designed for efficiency, Kaspersky SIEM integrates with your existing security tools and infrastructure, providing enriched threat intelligence, rapid alerts, and long-term storage without overloading your budget.

**Kaspersky
Professional
Services**

Essential Installation Service is part of the Kaspersky Professional Services portfolio, which provides expert support to implement and optimize Kaspersky solutions.

Service scope & coverage¹

The service is delivered remotely by Kaspersky engineers within 10 labor days².

Deployment of 1
Kaspersky SIEM server

Connection of 10 event
sources

Integration with 3 Kaspersky
products or infrastructure
services

Key stages

1

Kick-off & scope confirmation

Align objectives, checklist completion.

2

Sizing & planning

Validate hardware, network, and storage requirements.

3

Deployment & configuration

OS prep, installation of microservices, licensing, storage cluster setup.

4

Event sources connection

Integrate standard sources, configure authentication, LDAP/SMTP servers.

5

Post-implementation

Knowledge transfer, completion report.

Outcome & deliverables

Fully deployed and configured SIEM environment

Report of completion detailing the deployment

Administrators trained on basic configuration and management

With this service, your organization achieves a robust, operational security monitoring platform, ready for rapid detection, investigation, and response – giving CISOs clear visibility and control over critical security events

¹ Service applies to current supported versions of Kaspersky SIEM.

² For advanced integrations, custom configurations, or extended deployments, Essential Installation Service can create a tailored proposal.
